

Aparima Community Environment (ACE) Project

The aim of this project is to build and support the resilience of the Aparima community and their environment.

Land and use changes have over time led to increased pressure on the waterways, soils and ecosystems of the Aparima catchment.

The Aparima Community Environment project was started by a group of concerned catchment group leaders who wanted to mobilise farmers, landowners and the wider community to take on-ground action.

The first step is for farmers and land managers is to get a farm environment plan developed that identifies specific good management practices to put in place.

What can you do?

- ▶ Join your local catchment group
- ▶ Get a farm environment plan
- ▶ Use good management practices

The Aparima Community Environment project is proudly supported by:
